A SYSTEM
of GEOGRAPHY
with New Maps.
M. Vander Gucht Sculp.

Atlas Manuale:

Or, A New SETT of

MAPS

Of all the Parts of the EARTH,

AS WELL

ASIA, AFRICA, and *AMERICA,*

AS

EUROPE.

WHEREIN

GEOGRAPHY is RECTIFY'D,

By Reforming the OLD MAPS according to the

MODERN OBSERVATIONS.

And the Coasts of all Countries are laid down,

agreeable to Mr. EDMUND HALLEY's own Map.

Which is not done in any before extant.

This being the First whole SETT of MAPPS that agrees with the Observations and Corrections that have been made by the

ASTRONOMERS and TRAVELLERS of this Age.

The Maps are fairly Engraven on Copper; and the Scale is large enough to shew, not only the PROVINCES, but also all considerable CITIES and the TOWNS too of chiefest Note.

Mostly performed by HERMAN MOLL.

LONDON, *Printed for* T. Knapton, R. Knaplock, J. Wyat, J. *and* B. Sprint, J. Darby, D. Midwinter, E. Bell, A. Bettesworth W. Taylor, W. *and* J. Innys, R. Robinson, J. Osborn, E. Fayram, J. Pemberton, J. Hooke, C. Rivington, F. Clay, E. Symon, J. Batley, J. Bateman, J. Nicks, *and* T. Combes. M DCC XXIII.

Concerning this SETT of

MAPS,

AND THE

Correction of Longitude

By Modern Obſervations.

THE Art of making Maps and Sea Charts is an Invention of ſuch vaſt Uſe to Mankind, that perhaps there is nothing for which the World is more indebted to the ſtudious Labours of ingenious Men; for by the help of them Geography is made plain and eaſy, the Mariners are directed in fetching us the Commodities of the moſt diſtant Parts; and by the help of them we may at home with Pleaſure ſurvey the ſeveral Countries of the World, and be informed of the Situation, Diſtance, Provinces, Cities, and remarkable Places of every Nation. To do this with Exactneſs was an Art (to be ſure) not eaſily attained; it was not one Man, nor one Generation of Men, that could bring it to any reaſonable Perfection; and accordingly, tho' it was very early begun, it is but now in our Days that a Method is found out, whereby Maps may be truly corrected.

Even ſo early as *Anaximander*, the Diſciple and Succeſſor of *Thales*, geographick Tables or Maps have had a Being; a plain Demonſtration of the Value of this Science, ſince it began with the beginning of Literature. We are told *Alexander* carried *Calliſthenes* with him to *Babylon*, to make a Map of his Conqueſts;

and undoubtedly the *Greeks* and *Romans* had geographical Tables of all their Countries, tho' none of them have been preſerved to our Days, except that which ſhews the Unskilfulneſs of the Ancients in making them, I mean the ancient Map of the *Roman* Empire ſtill extant, under the Name of *Peutingerian* Tables, a from *Conr. Peutinger*, a learned Gentleman of *Augsburg*, to whom we are beholden for the Publication of them. Thoſe Tables contain an Itinerary of the whole Empire from Weſt to Eaſt, with the Diſtance of Towns by Menſuration; but then the Seas, Deſarts and Foreſts, being not travelled thro', or meaſured, are not ſet down in their true Form, the Latitude or Breadth from North to South being not at all regarded. This to be ſure muſt have been the general Fault, before Aſtronomy was made to aſſiſt Geography, which had been faintly attempted by divers, but never effected by any before *Ptolemy*.

Claudius Ptolemæus, a very learned Aſtronomer, who flouriſhed at *Alexandria* under the Reign of *Antoninus* the Philoſopher, making uſe of all preceding Diſcoveries, and joining the Obſervations of *Hipparchus*, *Timocharis*, and the *Babylonians*, with thoſe of his own, formed the Syſtem of the Univerſe, ſtill known by his Name, and preſcribed the Methods of diſcovering Longitude and Latitude, by Obſervation of the fixed Stars, and the Courſe of the Planets; inventing alſo the Meridians and Parallels, the better to direct the exact placing of Towns on the Map; and himſelf publiſhed a Sett of Maps, which were made uſe of for many Ages.

But ſince the Invention of the Mariner's Compaſs, and the great Increaſe of Navigation by the help of it, we have been able to viſit all thoſe moſt diſtant Places, that *Ptolemy* had but imperfect Accounts of, have eſpecially diſcovered that he was very much miſtaken in his Accounts of Longitude; and that all Maps hitherto extant are vaſtly erroneous in the Situation of Places Eaſtward. The Fault in general was computing the Degrees on Earth faſter than would anſwer to thoſe in the Heavens, and thereby making Places to ſeem farther diſtant from the firſt Meridian than they really are. Thus *France*, *Italy*, *Greece*, &c. were by little and little ſo extended, and the Mediterranean Sea thereby ſo much lengthened, that upon exact Obſervation it is found, at *Scanderoon* no leſs than 13 Degrees were gained, and the Voyage thither repreſented as 200 Leagues longer than it is. And the farther we go Eaſtward the greater is the Error, the Coaſts of *India* being laid 20 Degrees too far Eaſt, and *China* 27 Degrees beyond its true Situation. This Fault had like to have proved fatal to Mr. *Dampier* and his Company; for when they ſtood off from the South Sea

ea to the *East-Indies*, they found the Voyage 500 Leagues longer an the Maps repreſented it, and themſelves almoſt ſtarved by ıſſing to them. But as by Aſtronomy Geography was at firſt cor-ected, ſo the Amendment of theſe Errors is owing to the great ıprovement now made to that Science, and the exquiſite Inge-uity and Induſtry of modern Aſtronomers, who by the Aſſiſtance excellent Teleſcopes, and other Inſtruments of modern Invention, ıve made very conſiderable Diſcoveries in the Heavens, and thereby found out a way of aſcertaining Longitude as well as La-titude at Land, and correcting the Maps to a perfect Exactneſs.

This Method is by Obſervation of Eclipſes, whoſe beginning at *London* or *Paris* being exactly calculated, and thereby certainly predicted, and the beginning of the ſame Eclipſe being obſerved at any diſtant Place, the difference of Time is certainly known, and 15 Degrees being allowed to an Hour, the diſtance of Place may be fixed to a Mile. The Eclipſes of the Sun and Moon only were at firſt made uſe of to this purpoſe; but as thoſe occur but ſel-dom, and are viſible but in ſome certain Places, the Obſervations could not be often made; and therefore this great Work would have been long a doing, if the Diſcovery of the *Satellites* of *Jupi-ter* and their Eclipſes had not afforded a new and very conſiderable Help to it; for theſe being four in number, that make a continual Circuit round that Planet, there happens almoſt every day an Eclipſe of one or the other of them.

The *Satellites* of *Jupiter* were diſcovered by *Galileo*, the Eclip-ſes of them by *Huygens*, the Theory of them formed by the Aca-demy of Sciences at *Paris*, and the Eclipſes firſt calculated for a whole Year by Mr. *Flamſtead*, and together with the Method of computing Longitude thereby, communicated in the *Philoſophical Tranſactions* of *December*, 1683; ſince which time an Ephemeris of them is annually calculated, and Obſervations for correcting Geography are very commonly made abroad. Thus this great Work of diſcovering Longitude, which was thought impoſſible, is in a great meaſure performed, the Longitude any where on Land being certainly taken, and perhaps the Coaſts and Situation of Towns exactly laid down; and perhaps in time the Art may be ſo improved as to be practicable at Sea too; at leaſt if Ships were ſent out to make theſe Obſervations at all the Capes and head Lands round the Globe, the Seamen would be able to correct their Reckonings very often in long Voyages.

This

This being premiſed, *viz.* That there is a way of aſcertaining the Situation of Places Eaſt and Weſt, as well as North and South, and that many Obſervations have been made in diſtant Parts of the Earth, whereby the Coaſts and chief Towns have been brought to their right Situation in the Map, and thoſe being known, ſmaller Towns, and other Places dependent, corrected by them; to evince that *Sanſon*'s, and all the Maps formerly publiſhed, were exceedingly erroneous, and that the Set of Maps contained in this Book are correct, we ſhall ſet down a few of thoſe many Obſervations that have been made, and ſubjoin a Table of the Differences between thoſe Obſervations and the common Maps, *viz.*

Paris by Obſervation is found to be 2 Degrees 25 Minutes Eaſt from *London*. *Breſt* 4 D. 25 M. Weſt from *London*. *Madrid* 3 D. 37 M. Weſt from *London*. *Rome* 13 D. Eaſt from *London*. *Copenhagen* 12 D. 53 M. *Dantzick* 19 D. *Moſcow* 38 D. 45 M. *Aleppo* 38 D. 45 M. [*Philoſ. Tranſ. June* 1684. *Feb.* 1691.] At the *Cape of Good Hope P. Tachard* made an Obſervation by the *Satellites*, *June* 1685, and found it to be 14 D. 30 M. Eaſt from *Paris*. [*Voyages de Syam.*] *Aden* in *Arabia*, near the Mouth of the *Red-Sea*, by Obſervation is found to be 47 D. 30 M. Eaſt from *London*. *Cape Comorin* by Obſervation is found to be 76 D. Eaſt from *London*. *Bombay*, on the Weſtern Coaſt of *India*, is found to be 72 D. 30 M. Eaſt from *London*. Fort St. *George* 80 D. from *London*. [*Philoſ. Tranſ. June* 1683. & *Obſervat. Phyſ. & Math. Envoyes a l'Acad. de Paris.*] An Eclipſe of the Moon being by Mr. *Halley*'s Direction obſerved at *Ballaſore* in the Bay of *Bengall* by Mr. *Benj. Harry*, and the ſame Eclipſe obſerved at *London* by Mr. *Halley*, at *Dantzick* by Mr. *Hevelius*, and at *Avignon* by Mr. *Gallet*, the Meridional Diſtance between that Place and *London* was found to be 87 D. [*Philoſ. Tranſ. Feb.* 1682.] *P. Camillo* and *P. Beza*, by Obſervation of the *Satellites*, *Sept.* 29. 1689. at *Malacca*, found that Place to be 99 D. 45 M. Eaſt from *Paris*. The Weſt Point of *Java* is obſerved to be 104 D. Eaſt from *London*. *Syam*, by Obſervation of an Eclipſe of the Moon by *P. Tachard*, 98 D. 30 M. Eaſt from *Paris*. *Nimpo*, on the Eaſtern Coaſt of *China*, Obſervation by *P. Noel*, 117 D. 58 M. Eaſt from *Paris*. [*Obſerv. Phyſ. & Math.*] The Weſtern Coaſt of *America* was ſtretched out too far, as Mr. *Halley*'s Obſervations in his late Voyage make appear, *Cape Auguſtin*, on the Coaſt of *Braſil*, being 35 D. Weſt from *London*, notwithſtanding a late Author lays it down in 25. And *Cape Frio*, on the ſame Coaſt (under the Tropick) is 42 D. 30 M. Weſt from *London*.

'Twould

'Twould be tedious to enumerate all the Obſervations that have been made; theſe we have mentioned are at ſuch diſtant Parts, that almoſt all our Maps may be examined by them, and ſhall therefore trouble the Reader with only theſe two more.

France, in the former Maps of it, had been extended ſeveral Degrees on every ſide, ſo that the Kingdom was made to ſeem exceedingly larger than it is; but this has been corrected by many Years Labour of the Academy of Sciences at *Paris*, and now very lately a new Map correctly made, according to their Obſervations, was publiſhed at *Paris*, from which this in our Collection is copied.

Muſcovy on the other hand has been contracted in the Southern Part near 250 Miles; for the *Palus Mæotis* was made to riſe up to the 52 Deg. of Latitude; and the City of *Azoph* is placed in 51 Deg. North Latitude by *Sanſon* and the *Dutch* Maps. But ſince the Conqueſt of that Place the Czar has cauſed an actual Survey to be made of the Country South from *Moſcow*, and of the Courſe of the River *Don*; whereby it appears that *Azoph* lies in 47 Deg. and that the Courſe of that River is very much different from what was formerly repreſented, as may be ſeen in comparing the old Maps with that in this Book, which is copied from that Survey.

Abundance of other groſs Errors in former Maps, corrected in this Sett, might be mentioned, ſuch as the Head of the River *Nile*, laid down 15 Deg. that is, 900 Miles more South than it really is; the *Caſpian* Sea being made of oval Form from Eaſt to Weſt, whereas in truth 'tis almoſt an oblong Square from North to South; and many more, which, to avoid tiring the Reader, we omit, and leave it to his own Obſervation to diſcover.

But now to apply theſe Obſervations to our Maps, it muſt be remembred that the Degrees of Longitude in them are computed from the firſt Meridian, which was fixed at *Teneriffe*, before the *French* removed it to the Iſland *Ferro*, 2 Deg. 30 Minutes more Weſt; but the Obſervations we here ſet down being deduced from *London*, which is 17 Deg. 30 Min. Eaſt from *Teneriffe*, or 20 from *Ferro*, an Addition muſt be made of ſo many Degrees in Places Eaſtward, or Subtraction proportionate for Places Weſtward; and then the true Longitude of theſe Places, as they ought to ſtand in the Maps, will appear thus, *viz.*

True

True Longitude.

Longitude from *London* by Observation.	D.	M.		From *Teneriff.* D.	From *Teneriff.* M.	From *Ferro.* D.	From *Ferro.* M.	Erroneously placed in the common Maps. *Sanson.* D.	*Sanson.* M.	*Dutch* Maps. D.	*Dutch* Maps. M.

Fort St. George.	80.	—		97.	30.	00.	----	119.	----	119.	----
Ballaſore.	87.	—		104.	30.	07.	----	123.	----	125.	----
Malacca.	102.	10.		119.	40.	22.	5.	140.	30.	142.	30.
Syam.	100.	55.		118.	25.	20.	55.	133.	30.	142.	----
Weſt Point of *Java.*	104.	—		121.	30.	24.	----	140.	----	142.	30.
Nimpo in *China.*	120.	23.		137.	53.	40.	23.	168.	----	165.	----
Pekim.	117.	45.		135.	15.	37.	45.	161.		160.	----
Cape Auguſtin in *Braſil.*	35.	—	W.	342.	30.	345.	----	348.	----	347.	----
Cape Frio.	42.	30.	W.	334.	30.	337.	----	343.	----	343.	----

By this Table may be ſeen the Differences between the new Obſervations, which are according to the Truth, and the old Maps; and thereby it appears that *India* was laid almoſt 400 Leagues farther off than it really is, and *China* no leſs than 500 Leagues too far to the Eaſt. Nay, to go no farther than *Rome*, the Fault is there ſo great, as to lay that City 135 Miles too far off; and the Diſtance between *Genoa* and *Rome*, meaſured on an old Map, ſeems at leaſt 40 Miles more than it is. By theſe Tables will alſo be ſeen how theſe Maps agree with the Obſervations, and conſequently whether they are not rather to be conſulted than the old Maps. But it is neceſſary to adverti ſe, that the four general Maps of *Europe*, *Aſia*, *Africa* and *America*, are engraven according to the old, that ſo by comparing the particular Maps with them, the new Corrections may the better appear.

A TABLE *of the* MAPS *contained in this* VOLUME.

1 THE WORLD.
2 EUROPE.
3 England.
4 Scotland.
5 Ireland.
6 France.
7 Flanders, *and the other Provinces of the* Auſtrian Netherlands.
8 Holland, *and the other Provinces of the* United Nether lands.
9 Germany.
10 Swiſſerland.
11 Savoy *and* Piedmont.
12 Italy.
13 Spain *and* Portugal.
14 Scandinavia *in general with* Iſeland.
15 Denmark.
16 Sweden.
17 Poland.
18 Muſcovy, *or the* Ruſſian *Empire.*
19 Hungary.
20 Greece, *and the other Countries ſubject to the* Turks *in* Europe.

21 ASIA *in general.*
22 Turkey *in* Aſia, *with* Arabia.
23 Aſia Minor, Syria, Chaldea, Meſopotamia, Armenia, Georgia, *the* Black-Sea, *and* Crim-Tartary.
24 *The* holy Land, *or* Judæa, *divided into the Territories of the twelve Tribes.*
25 Perſia.
26 Grand Tartary.
27 *The main Land of* India, *i. e. the Empire of the* Great Mogul, *and* Pegu, Tonquin, Syam, *&c.*
28 *The Iſlands of the* Indian-Sea.
29 *The Empire of* China.

30 AFRICA *in general.*
31 } Barbary *and* Biledulgerid.
32 } Egypt *and* Barca.
33 Zaara, Negroland, Guiney, *&c.*
34 Abyſſinia *and* Nubia.
35 Lower Ethiopia, Congo, Angola, Monoemugi, *and* Monomotapa; *together with the Coaſts of the* Caffres *and* Zanguebar.

36 AMERICA *in general.*
37 *The* N. E. *Part of* America, *viz.* Louiſana, New Mexico, New Granada, *&c. together with the Iſland* California.
38 *The* N. W. *Part, viz.* Hudſon's Streights *and* Bay, Terra Labarador, *or* New Britain; Canada, *or* New France; *the* Engliſh Empire, *and* Newfoundland.
39 *The Kingdom of* Mexico, *or* New Spain, *divided into its four* Audienza's.
40 Terra Firma, *with the* Antille *and* Caribbee *Iſlands.*
41 *The Kingdom of* Peru, *and the Inland Country* Amazonia.
42 Braſil, *divided into its Captainſhips.*
43 Paraguay, *and the other Countries lying on both ſides the great River* della Plata.
44 Chili, Magelianica, *the* Streights, *and* Terra del Fuogo.
